

New Method to Update Systems

Previously, we used a single file to update our systems, from now on, we shall use the program "UPDATER", this program is going to serve to get back the future files which will contain the firmware to update then all our devices. The installation of the program "UPDATER" on your PC has to be done only once.

(ADSGPS, M4, M4GPS, M10, PROIII EVO)

Method

- Install Alfano Updater v1.0 (this operation will be made only once by PC)
- Get back the file « firmware*.ZIP », then unwind it and place it on your PC desk
- Double-click on the file, example : PROIII EVO_4_25b.fwr, the updater opens then automatically :

- Select possibly your language (above on the left)
- Click on « next » (below on the right)

- Select the type of wished connection, the PROIII EVO can be updated in Bluetooth but it is necessary to connect it to a module GPS2 or GPS4, if you owe to update the PROIII EVO alone, it is necessary to use A4220

- Choose then « Alfano USB cable » as well as the attributed port COM

- Click on « Next » to launch the update

- Wait for the extinction of your system, the update is done.
